DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims **1-26** are drawn to a ***molecular memory element*** having two or more discrete states, classified in class 365, subclass 151.
 - II. Claims **37-41** are drawn to ***a monolithically IC circuit device***, classified in class 365, subclass 63.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions **II** and **I** are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)).

In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the claim IC circuit structure of group II could have include any other type(s) of memory cells, i.e., flash, ROM, SRAM, ferroelectric, etc., besides the ***molecular*** memory type, and thus it is not necessary to include any type of embedded molecular cells if desired. The subcombination has separate utility such as a particular “molecular” memory type and can be used separately in any other

structure, not necessarily be required and/or to be embedded in any ASIC or monolithically IC device.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art, and because of their recognized divergent subject matter, or recognized different classifications which requires more examiner time to search and examination, the required restriction for separate examination purposes as indicated above is proper.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Viet Q. Nguyen whose telephone number is (571) 272-1788. The examiner can normally be reached on 7am-6pm (EST).
